1) * Intersection of 2 LinkedList:

HashSet hs

hs.add(head1) head1.next. until head1 null

traverse 2nd LinkedList

if (!hs.add(head2))

return head2.

head2 = head2.next.

return null.

2) * Detect cycle in LL:

fast = head.next slow = head.

while (fast != null && fast.next != null)

if (fast == slow) true;

slow = slow.next.

fast = fast.next.next

return false.

3) * Reverse Node in k-group

initialize cur, prev, next with dummy

Add dummy node at start

count total node excluding dummy

while (count >= k)

cur = prev.next

nex = cur.next

for (i = 1; to k)

{ cur.next = ~~prev~~.next

nex.next = prev.next;

prev.nex = next;

nex = curr.next

}

prev = curr;

count -= k.

return dummy.next;

4) Check if singly linked list is palindrome.

enter all elements into stack
Iterate over LL and pop an element
If same continue
else return false

TC: O(n)
SC: O(n)

2nd: find mid of LL
reverse the second half
and the compare the first half & 2nd half

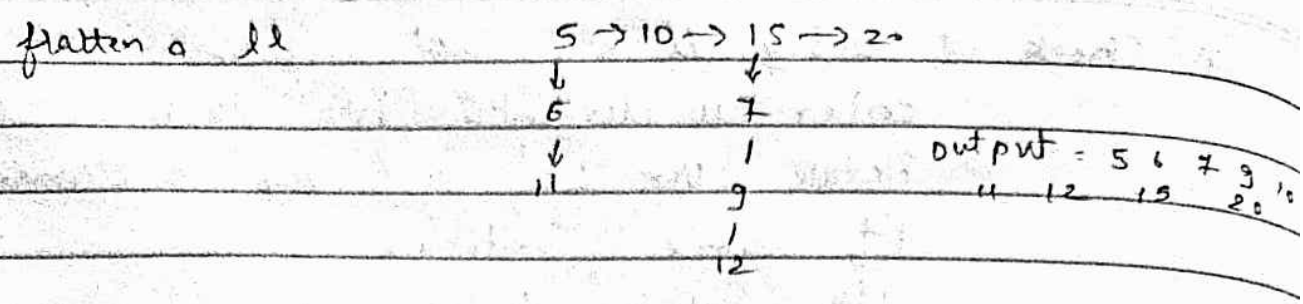
TC: O(n) SC: O(1)

5) Detect cycle in LL and return the start node of cycle.

```
fast = head, slow = head
while (fast != null && fast.next != null)
{   slow = slow.next;
    fast = fast.next.next;
    if (slow == fast)
    {   fast = head;
        while (fast != slow) {
            fast = fast.next;
            slow = slow.next;
        }
        return slow;
    }
}
return null
```

TC: O(n) SC = O(1)

* flatten a ll



```
flatten (Node root)
    if (root = null or root.next = null) return root;
    root.next = flatten(root.next)
    root = merge (root, root.next)
    return root.

merge (Node a, Node b)
    if (a == null) return b;
    if (b == null) return a;
    Node result;
    if (a.data < b.data) {
        result = a;
        result.bottom = merge (a.bottom, b)
    }
    else {
        result = b;
        result.bottom = merge (a, b.bottom);
    }
    return result;
```

TC: O(n) SC: O(1)

* Rotate a ll by k times to right:

```
rotate (ListNode head)
{   ptr = null;
    temp = head;
    while (temp.next != null) {
        ptr = temp; temp = temp.next;
    }
```

// capture 2nd last Node

```
ptr.next = null;
temp.next = head;
head = temp;
return temp;
}
```

for handling large k values
count node in LL
and perform k = k % count;

8 * Copy list with ~~deep~~ random pointer:

① 
add nodes between.

```
iter = head, front = head;
while (itr != null)
{ front = iter.next;
  Node c = new Node(itr.val);
  iter.next = c;
  c.next = front;
itr = ~~front~~ front;
}
```

② point the random values.

```
iter = head
while (iter != null)
if (itr.random != null)
        itr.next.random = iter.random.next;
iter = itr.next.next;
}
```

(3) make original list intact and changes the new list;

```
Node d = new Node(0)
itr = head, start = d;
while (itr != null) {
  front = itr.next.next
  d.next = itr.next;
  itr.next = front;
  d = d.next;
  itr = front;
return start.next;
```

TC: O(n) + O(n) + O(n) = O(n) SC = O(1)

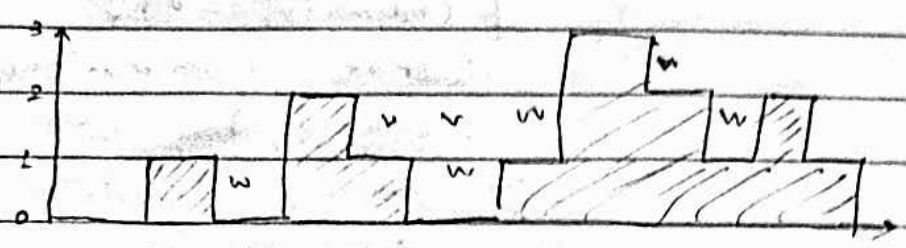
9) 3Sum: return triplets such that they are of different ind

```
int sum == 0,
  Arrays.sort(nums)
  ArrayList<ArrayList<Integer>> res = new ArrayList<>()
for (int i=0; i<n-2) {
  if (i==0 || (i>0 && num[i] != num[i-1])) {
int lo = i+1, hi = num.length()-1, sum = 0 - nums[i]
while (lo < hi) {
if (num[lo]+num[hi] == sum) {
ArrayList<Integer> l = new ArrayList();
  l.add(num[i]), l.add(num[lo]) l.add(num[hi])
  res.add(l);
while (lo<hi && num[lo] == num[lo+1]) lo++;
while (lo<hi && num[hi] == num[hi-1]) hi--;
} else if (num[lo]+num[hi] < sum) lo++;
else hi--;
return res
```

TC: O(N²) O(N)

10) Trap Rain water Compute how much water it can trap:

Input ip: [0 1 0 2 1 0 1 5 2 1 2 1]



```
int res = 0
int n = arr.length
int left = 0, right = n-1
int lmax = 0, rmax = 0.
while (left <= right) {
    if (arr[left] <= arr[right]) {
        if (leftmax < arr[left]) leftmax = arr[left]
        else res += lmax - arr[left] }
    left++; }
    else {
        if(rmax < arr[right]) rmax = arr[right]
        else res += rmax - arr[right]
    right--;}
}
return res;          TC : O(N)    SC : O(1)
```

11) Remove duplicate from sorted array:

2 pointer:

```
i = 0
for (j = 1 ; j < arr.length ; j++)
{   if (arr[i] != arr[j])
    { i++;   arr[i] = arr[j];
    }
}
return i+1;          TC : O(N)    SC : O(1)
```

12) Max consecutive ones input binary val.

```
int ones = 0, max = 0;
for (int i=0; i< nums.length; i++)
 { if (nums[i] == 0) {
        max = Math.max(ones, max);
        ones = 0; }
    else ones++;
 } return Math.max (max, ones);
```

TC : O(N) SC : O(1)

Greedy Algo:

13) N meeting in one room:

```
class Pair {
    int s, e;
    Pair (int s, int e) {
    this.s = s; this.e = e;
    }
}

maxMeeting (int start[], int end[], int n) {
int res = 0;
Pair arr[] = new Pair [n];

Arrays.sort (arr, new Comparator<Pair> () {
    public int compare (Pair p1, Pair p2) {
        return p1.e - p2.e;
    }
});
int last = 0;
for(int i = 0; i<n; i++){
```

```
if (arr[i].s > last) {
    res++;  last = arr[i].e;
  }
} return res;
}
```

TC: O(n) for inserting in ds.
O(n log n) for sorting
O(n) for checking
∴ O(n log n) SC: O(n)

11) Min platforms: given arrival & depart time of trains find min platforms required.

```
Arrays.sort(arr); Arrays.sort(dep);
platform=1, result=1
i=1 j=0
while (i<n && j<n) {
  if (arr[i]<=dep[j]) {
    platform++; i++}
  else if (arr[i] > dep[j]){
    platform--; j++}
  result = Math.max(result, platform);
}
return result
```

TC: O(n log n) SC: O(1)

15 Job scheduling problem:
given the jobid, deadline, profit we need to maximize the profit.

Sort jobs in decreasing order of profit
Arrays.sort(arr, (a, b) → b.profit - a.profit);

find max deadline

result [] = new int [max_deadline];

initialize the array element with -1

countjob = 0, jobprofit = 0

```
for (int i=0; i<n; i++) {
    for (j = arr[i].deadline; j>0; j--) {
        if (result[j] == -1) {
            result[j] = i;
            profit += arr[i].profit;
            countj++;
            break;
        }
    }
}
```

TC : O(n log n) sorting + O(N*M) for calculation

        }
    }
}
return list;
}
```

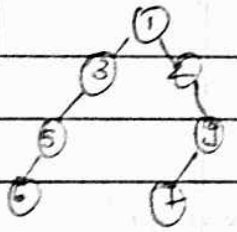
TC: O(N log N + log N + log N) SC: O(N)

Q2) Path to given Node:

```
if (a == null) return;
helper(a, b, ans)
Collections.reverse(ans);
return ans;
helper(Node a, int b, ans) {
  if (a == null) return false
  if (a.val == b) ans.add(a.val); return true;
  if (helper(a.left, b, ans) || helper(a.right, b, ans))
      ans.add(a.val);
      return true
return false;
}
```

T.C: O(N) S.C: O(1)

Q3) Max width of binary tree : (including null nodes between leftmost not-null & rightmost not-null node).



ans = 7

```
Queue<Pair> q = new LinkedList<>();
q.offer(new Pair(root, 0));
int max = 0;
while (!q.isEmpty()) {
  size = q.size()
  min = q.peek().num;   // for handling overflow
  int left = right = 0
  for(i=0; i<size; i++) {
  Pair p = q.poll();
  Node n = p.node;
  int num = p.num - min;
```

```
        if (i==0) first = num;
        if (i==size-1) last = num;
        if (n.left != null) q.offer(new Pair(n.left, 2*num+1));
        if (n.right != null) q.offer(new Pair(n.right, 2*num+2));
      }
      max = Math.max(max, right - left + 1);
    }
    return max;
```

T.C: O(N) S.C: O(N)

84) Level order traversal :

```
if(root == null) return ans;
Queue<Node> q = new LinkedList<>();
q.offer(root);
while (!q.isEmpty()) {
    size = q.size();
    sub = new ArrayList<>();
    for (i=0; i<size; i++) {
        Node n = q.poll();
        sub.add(n.val);
        if (n.left != null) q.offer(n.left);
        if (n.right != null) q.offer(n.right);
    }
    ans.add(new ArrayList(sub));
}
return ans;
}
```

T.C: O(N) S.C: O(N)

85) Height of Binary tree:

Recursive:

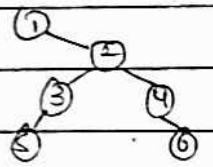
```
{ if (root == null) return 0;
return Math.max(1+maxDepth(root.left), 1+maxDepth(root.right));
}
```

SC: O(1) + O(H) H = height of tree

TC: O(N).

Iterative: level order traversal:

86) Diameter of tree: longest path between any two Node passing root or not.



ans = 4.

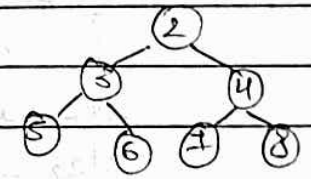
```
d[] = int[1];
height(root, d)
return d[0];
height (root, d[]) {
if (root == null) return 0;
l = height (root.left, d);
r = height (root.right, d);
d[0] = max(d[0], l+r)
return 1 + Math.max (l, r);
```

87) Check if balanced binary tree:

```
{ if (root == null) return true;
  return height(root) != -1;
}
height(root)
  if (root == null) return 0;
  l = height(root.left)
  if (l == -1) return -1;
  r = height(root.right)
  if (r == -1) return -1
  if (Math.abs(l-r) > 1) return -1
  return 1 + Math.max(l, r);
}
```

TC: O(N) SC: O(1)

88) Lowest Common Ancestor :



p = 8 q = 5
ans = 2.

```
lca(root, p, q)
{ if (root == null || p == root || q == root) return root.
  l = lca(root.left, p, q)

  if (l == null) return right
  else if (right == null) return left
  else return root;
}
```

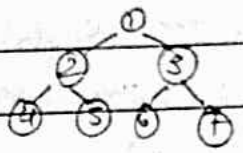
TC: O(N) SC: O(N) for space.

Eg) Check if two trees are identical or not :

```
{ if (p == null && q == null) return true;
  if (p == null || q == null) return false;
  return p.val == q.val && fun(p.left, q.left) && fun(p.right,
                                                      q.right)
}
```

TC: O(Min(M,N)) SC: O(Min(H_1, H_2))

90) ZigZag Traversal :



ans [[1], [3,2], [4,5,6,7]]

```
Queue<TreeNode> q;
q.offer(root);   flag = true;
while(q.isEmpty()) {
  size = q.size();
  for(i=0; i<size; i++) {
    TreeNode n = q.poll();
    if(flag) sub.add(n.val);
    else sub.add(0, n.val);
    if (n.left != null) q.offer(n.left);
    if (n.right != null) q.offer(n.right);
  }
  ans.add(sub);
  flag = !flag
}
return ans;
}
```

TC: O(N) SC: O(N)

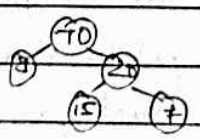
91) Boundary Traversal :

```
left(root, ans) {
if (root == null || (root.left == null && root.right == null))
    return;
ans.add(root.val)
if (root.left != null) left(root.left, ans)
else left(root.right, ans)
{
```

```
right (root, ans) {
if (root == null || (root.left == null and root.right == null)
        return
if (root.right != null) right (root.right, ans)
else right (root.left, ans)        ans.add (root.val)
}
leaf (root, ans) {
if (root == null) return
if (root.left == null && root.right == null) ans.add
                                              (root.val)
return
leaf (root.left, ans)
leaf (root.right, ans)
}
max () {
if (root == null) return
ans.add (root.val)
left (root.left, ans)
leaf (root.left, ans)
leaf (root.right, ans)
righ (root.right, ans)
}
```

O(N) O(N)

92) Path sum :



ans = 42

```
int dp = {Integer.MIN_VALUE}
max (root, d)
return d[0];
```

```
max (root, d){
if (root == null) return 0;
l = Math.max (max (root.left, d), 0)
r = Math.max (max (root.right, d), 0);

d[0] = Math.max (d[0], r+l+root.val);
return Math.max (r, l) + root.val;
}
```

TC: O(N) SC: O(N)

23) Construct tree from Inorder & preorder traversal:-

```
build (ino, preo)
{ Map<int, int> m;
for (i=1 to n)
map.put (in[i], i);

return construct (pre, 0, pre.length-1, in, 0, in.length-1,
map);
}
construct (pre[], startpre, endpre, in[], startin, endin,
map) {
if (startpre > endpre || startin > endin) return null;
root = new TreeNode (pre[startpre])
ind = map.get (root.val);
numleft = ind - startin;
root.left = construct (pre, startpre+1, startpre+numleft,
in, startin, ind-1, map);
root.right = construct (pre, startpre+numleft+1, endpre, in,
ind+1, endin, map);
return root;
}
```

TC: O(N) SC: O(N)

Date: __/__/__ Page No.: _____

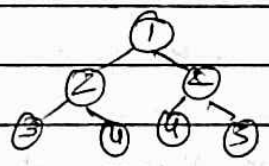
94) Construct Tree using inorder & postorder traversal

```
build(inorder, post) {
return helper(postorder, 0, post.length-1,
              in, 0, in.length-1)
}
helper(post, startp, endp, in, starti, endi) {
  if(startp > endp || starti > endi) return null;

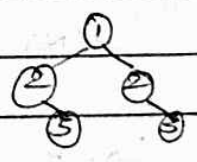
  TreeNode root = new TreeNode(post[endp]);
  for(i = starti; i <= endi; i++) {
    if(in[i] == root.val) {
      k = i; break;
    }
  }
  root.left = helper(post, startp, startp+k-starti-1, in,
                     starti, k-1);
  root.right = helper(post, startp+k-starti, endp-1,
                      in, k+1, endi);
  return root;
}
```

TC: O(N) SC: O(N)

95) Symmetric tree :



ans = true



ans false

```
isSym(root) {
  if(root == null) return true;
  return helper(root.left, root.right);
}
```

```
helper (r1, r2) {
if (r1 == null || r2 == null) return r1 == r2;
boolean l, r = false
if (r1.val == r2.val) {
    l = helper (r1.left, r2.right);
    r = helper (r1.right, r1.left);
}
return l && r;
}
```

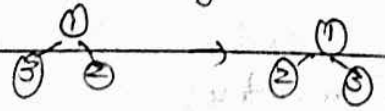
TC: O(N) SC: O(N).

96) flatten binary tree to ll : preorder traversal right left, root

```
prev = null
flatten(root) {
  if (root == null) return;
  flatten (root.right);
  flatten (root.left);
  root.right = prev
  root.left = null
  prev = root;
}
```

O(N) O(N)

97) Check binary tree is Mirror of itself :



```
if (root == null) return;
root = helper(root)
```

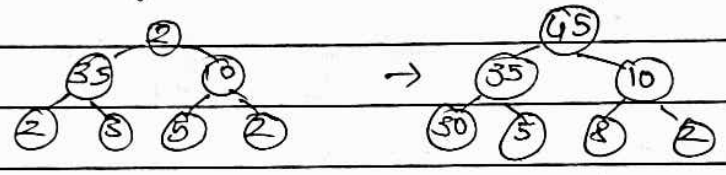
Date: __/__/__ Page No.: _____

```
Node helper(root) {
  if (root == null) return null;
  Node temp = helper(root.left);
  root.left = helper(root.right);
  root.right = temp;
  return root;
}
```

TC: O(N) SC: O(1) (with recursive stack)

9.) Children sum property:

val of a node = value of its children nodes



val can only be incremented

```
fun() {
if (root == null || (root.left == null && root.right == null)
    return;
diff = root.val - ((root.left != null) ? root.left.val : 0) + ((root.right
    != null) ? root.right.val : 0);

if (diff > 0) {
  if (root.left != null) root.left.val += diff
else if (root.right != null) root.right.val += diff
}
fun(root.left)
fun(root.right)
root.val = (root.left != null ? root.left.val : 0) +
           (root.right != null ? root.right.val : 0);
}
```

TC: O(N) SC: O(N)

Array :

99) Set Matrix Zero :

if an ele is 0 set entire row and col as 0.

```
is Col -
is Col = false
for (i=0; i<row; i++) {
  if (mat[i][0] == 0) isCol = true;
  for (j=1; j<col; j++) {
    if (mat[i][j] == 0) {

        start = ptr.right
    }
    prev = ptr.right;
}
ptr = ptr.next;
}
}
```

O(N) O(1)

104) Search in BST :

```
while (root != null) {
if (root.val == x) return root;
else if (root.val > x) root = root.left
else root = root.right;
}
return null;
```

O(H) O(1)

105) Construct BST : given array in increasing order.

```
start = 0    end = arr.length - 1
bst (arr, start, end) {
if (start > end) return null;
Node root = new Node (arr[(start + end)/2]);
```

```
root.left = bst(arr, start, m-1);
root.right = bst(arr, start, m+1);
return root;
}
```

O(N) O(log(N));

105) construct BST from preorder traversal:

```
root = new Node(pre[0]);
for(i=1; i< pre.length; i++){
    construct(root, pre[i]);
}
return root;
}
construct(root, data){
if(root == null){
    node = new Node(data);
    return node;
}
if(root.val > data){
root.left = construct(root.left, data);
}
else root.right = construct(root.right, data);
return root;
}
```

O(N²) O(N²)

106) Check BT is a BST ? partial BST left node val <= root
right >= root.

Date: __/__/__ Page No.: _____

```
fun (root) {
 if (root == null) true;
 return helper(root, Long.MIN_VALUE, Long.MAX_VALUE
}
helper(root, long min, long max) {
 if (root == null) return true;
 if (root.val <= min || root.val >= max) return fa
 return helper(root.left, min, root.val) && helper(
                root.right, root.val, max);
}
```

O(N) O(N).

107) Lowest common ancestor of BST:

```
d1 = p.val   d2 = q.val
cur = root
while (cur != null) {
 if (d1 > cur.val && d2 > cur.val) cur = cur.right
 else if (d1 < cur.val && d2 < cur.val) cur = cur.left
 else break;
}
return cur;
```

O(N) O(1)

108) Inorder pre and successor of BST:

key = 60 and root given.

predecessor = ~~smallest~~ biggest on LHS

successor = smallest on RHS

```
pre = -1   suc = -1
while (pr root.data != key) {
if (key > root.data) {
    pr = root.data;
    root = root.right;
}
else {
    suc = root.data;
    root = root.left;
}
}
leftsub = root.left.
while (leftsub != null) {
pre    pre = root.leftsub.data;
    leftsub = leftsub.right;
}

rightsub = root.right;
while (rightsub != null) {
suc    rightsub pre = rightsub.data;
    rightsub = rightsub.left;
}
```

O(N) O(1)

109) Floor in BST : a key given, find greatest value less than equal to BST.key.

```
pr = null;
while (root != null) {
if (root.data == val) return root.data;
else if (root.data > x) root = root.left;
```

```
        else {
    prev = root ;
        root = root.right;
        }
    }
    return prev.data;
}
```

O(h) O(1);

110) Ceil in BST : given a key find smallest value greater than equal to key.

```
prev = null
while (root != null) {
    if (root.data == x) return x;
    else if (root.data > x) { prev = root;
                              root = root.left;
                            }
    else { root = root.right; }
}
return prev == null ? -1 : prev.data;
```

O(h) O(1)

111) Kth - smallest in BST :

count = 0, ans = 0

```
int Kthsm(root, K) {
    search(root, K);
    return ans;
}
```

```
search (root, k) {
if root == null return
search (root. left, k);
count++
if (count == k) ans = root. val
search (root.right}, k);
}
```

O(min(k,N)) O(min(k,N))

112 Kth largest element in BST :

```
int ans = 0          fun (root, k) {
                     arr [] = {k};
                     search (root, arr);
                     return ans;
                     }
                search (root, k) {
                if (root == null) return.
                search (root. right, arr)
                 arr[0]--
                if (arr[0] == 0) ans = root.val;
                search (root. left, arr);
                }
```

O(min (K,N)) O(min(K,N));

113) Two sum 4 : a target k return true if there exisicts two element such that there sum == k.

```
fun(root, k) {
HashSet<Integer> st = new HashSet<>();
return inorder(root, k, st);
}
inOrder(root, k, st) {
  if (root == null) return false;
  if (st.contains(k-root.val)) return true;
  st.add(root.val);
  return inorder(root.left, k, st) ||
         inorder(root.right, k, st);
}
```

O(n) O(n)

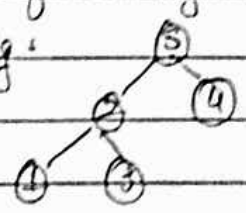
114) BST iterator :

1) Simple inorder traversal add elements in arrayList in ascending order, maintain pointer.

2) Maintain stack and fill all the elements from root to left when next() called pop the top element and check if top.right present if yes then fill stack with the element and element on left leftMostInorder(). O(1) Avg O(h)

115) Size of largest BST in Binary tree:

eg:



ans = 3

tree at root 2.

```
class NodeVal {
